21. Python Graphics: Practice Click

Mr. Neat

getMouse()

- getMouse() is a GraphWin method.
- getMouse() pauses until the user clicks the mouse in the GraphWin window.
- This method can be used to make an app pause until the mouse is clicked

Lab 21

- Make a copy of your code from the review lab (the one with all of your parts in it)
- Use the mouse click method to allow each element of your picture to show up sequentially.
- For example, when the app starts,
    - The window should be blank
    - After you click once, the grass should appear
    - Click 2: the sky should be added to the grass
    - Click 3: the sun should be added to scene
    - Click 4: the person……
